INTRODUCCIÓN

En el contexto de la investigación científica, la objetividad y la imparcialidad son pilares fundamentales para garantizar la validez y la fiabilidad de los resultados obtenidos. Sin embargo, diversos estudios han destacado la presencia de sesgos en la codificación y clasificación de datos, lo que puede influir significativamente en la interpretación y conclusión de los hallazgos científicos. En este informe, se aborda esta problemática mediante un análisis exhaustivo de la literatura académica relacionada con los sesgos en la investigación científica, con un enfoque particular en el diseño de interfaces de usuario. A través de este análisis, se busca identificar patrones y tendencias que puedan ayudar a comprender mejor el fenómeno de los sesgos en la codificación y clasificación, así como proponer estrategias para mitigar su impacto en la práctica científica.

Este estudio se enmarca en el contexto de la Facultad de Matemáticas e Ingenierías de la Universidad Funcionamiento Universitario Konrad Lorenz, con el objetivo de contribuir al avance del conocimiento en el campo del diseño de interfaces de usuario y promover una investigación científica más justa, equitativa y confiable.

DESCRIPCIÓN DEL TEMA

El objetivo de este estudio es analizar el impacto de los sesgos en la codificación y clasificación en diversas disciplinas científicas. La investigación se enfoca en identificar patrones y tendencias en la literatura académica a través del análisis de títulos, resúmenes, palabras clave, fuentes y autores de artículos indexados en Scopus.

Justificación de la Elección

La elección de este tema se justifica por varias razones:

1. **Importancia del Sesgo en la Investigación:** El sesgo en la investigación científica puede influir significativamente en los resultados y conclusiones, afectando la validez y la replicabilidad de los estudios. Identificar y comprender estos sesgos es crucial para mejorar la calidad de la investigación.
2. **Relevancia Multidisciplinaria:** El impacto de los sesgos no se limita a una sola disciplina. Este estudio abarca múltiples campos del conocimiento, lo que permite obtener una visión integral y comparativa del problema.
3. **Uso de Técnicas de Análisis Modernas:** La implementación de técnicas avanzadas de procesamiento del lenguaje natural (NLP) y análisis de datos permite obtener insights profundos y detallados que pueden no ser evidentes mediante métodos tradicionales.
4. **Contribución a la Comunidad Científica:** Los resultados de este análisis pueden ayudar a la comunidad científica a identificar áreas problemáticas y proponer estrategias para mitigar el impacto de los sesgos en futuras investigaciones.
5. **Relevancia en el Contexto Actual:** En un entorno donde la ciencia y la tecnología evolucionan rápidamente, es esencial garantizar que los avances y descubrimientos se basen en datos y análisis imparciales. Este estudio contribuye a ese objetivo al destacar la presencia y el impacto de los sesgos en la investigación científica.

METODOLOGÍA APLICADA

Para llevar a cabo este estudio, se implementaron los siguientes pasos:

1. **Construcción del Query:** Se diseñó una consulta utilizando los términos "coded" y "bias", restringiendo la búsqueda a artículos publicados entre 2022 y 2024 en las áreas de informática (COMP), sociología (SOCI), neurología (NEUR) o psicología (PSYC), y que fueran de tipo "ar" (artículo). Además, se limitó la búsqueda a artículos en inglés, en su etapa final de publicación, y de acceso abierto, con afiliación de instituciones de Estados Unidos, Alemania, Canadá o Reino Unido.
2. **Análisis de Títulos, Resúmenes y Palabras Clave:** Se aplicaron técnicas de procesamiento de lenguaje natural (NLP) para limpiar y analizar los títulos, resúmenes y palabras clave de los artículos obtenidos. Se extrajeron las palabras más frecuentes, se identificaron patrones temáticos y se cuantificó la aparición de palabras clave relevantes.
3. **Análisis de Fuentes y Autores:** Se agruparon los artículos por fuente y se contabilizó el número de artículos publicados por cada una. Asimismo, se examinaron los autores más prolíficos y su contribución al corpus de literatura analizada.
4. **Análisis de Categorías Gramaticales:** Se utilizó el modelo de spaCy para realizar un análisis gramatical de los títulos y resúmenes de los artículos, con el fin de identificar las categorías gramaticales más frecuentes y su distribución en el texto.
5. **Análisis Temporal:** Se visualizaron las tendencias temporales de publicaciones a lo largo de los años, para identificar posibles cambios o patrones en la producción científica relacionada con el tema de estudio.

Con estos enfoques metodológicos, se buscó obtener una comprensión integral del impacto de los sesgos en la codificación y clasificación en la literatura científica, así como identificar posibles áreas de mejora y dirección para futuras investigaciones.

QUERY UTILIZADO EN LA BUSQUEDA DE SCOPUS

"coded" AND "bias" AND PUBYEAR > 2022 AND PUBYEAR < 2025 AND (LIMIT-TO (SUBJAREA, "COMP") OR LIMIT-TO (SUBJAREA, "SOCI") OR LIMIT-TO (SUBJAREA, "NEUR") OR LIMIT-TO (SUBJAREA, "PSYC")) AND (LIMIT-TO (DOCTYPE, "ar")) AND (LIMIT-TO (LANGUAGE, "English")) AND (LIMIT-TO (PUBSTAGE, "final")) AND (LIMIT-TO (AFFILCOUNTRY, "United States") OR LIMIT-TO (AFFILCOUNTRY, "Germany") OR LIMIT-TO (AFFILCOUNTRY, "Canada") OR LIMIT-TO (AFFILCOUNTRY, "United Kingdom"))

ANÁLISIS DE RESULTADOS

Fuentes con artículos más publicados:

Para el análisis de las fuentes con más artículos publicados, se realizó un conteo de la cantidad de artículos por cada fuente (Source title) en el conjunto de datos. Posteriormente, se ordenaron estas fuentes en orden descendente según el número de artículos publicados. Se seleccionaron las diez fuentes principales y se visualizaron utilizando un gráfico de barras.

El gráfico resultante muestra claramente las diez fuentes principales, identificadas por el título de la fuente en el eje x y el número de artículos publicados en el eje y. La coloración de las barras en tono azul cielo proporciona una visualización clara y agradable. Además, el título del gráfico ("Fuentes con más artículos publicados") y las etiquetas de los ejes ("Source title" para el eje x y "Número de artículos" para el eje y) brindan información adicional y facilitan la interpretación de los datos.

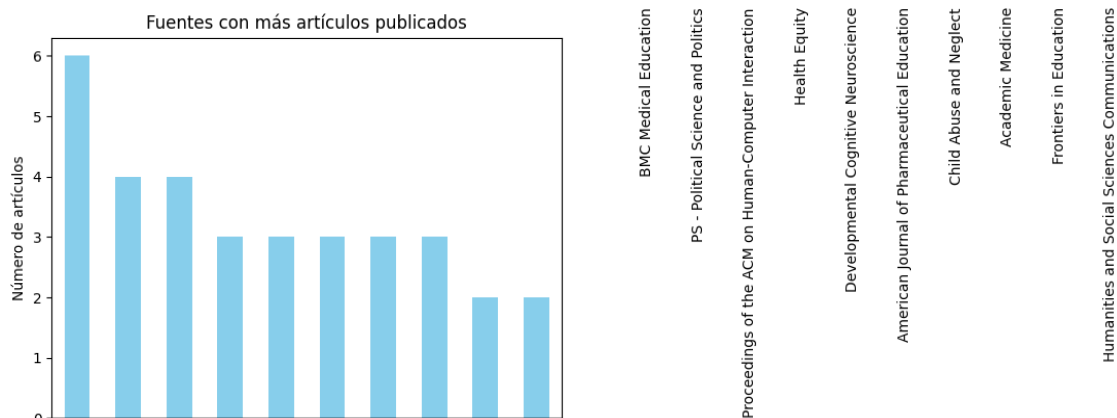

Imagen 1. Fuentes con artículos más publicados. Imagen tomada de output de Google Colab.

Palabras Más Frecuentes en Títulos:

A continuación, se presenta una tabla con las palabras más frecuentes encontradas en los títulos de los artículos analizados, junto con su frecuencia y posición en el ranking:

	Word	Frequency	Rank				
0	analysis	20	1.0	11	clinical	9	7.0
1	study	18	2.0	12	pandemic	9	7.0
2	gender	13	3.0	13	neural	8	8.0
3	qualitative	12	4.0	14	review	8	8.0
4	social	12	4.0	15	information	8	8.0
5	covid19	12	4.0	16	use	8	8.0
6	data	11	5.0	17	research	7	9.0
7	content	10	6.0	18	behavior	7	9.0
8	learning	9	7.0	19	networks	7	9.0
9	across	9	7.0				
10	visual	9	7.0				

Imagen 2. Palabras Más Frecuentes en Títulos. Imagen tomada de output de Google Colab.

Resúmenes Destacados:

Se proporcionan a continuación algunos resúmenes destacados que ofrecen una visión general de los hallazgos y temas abordados en los artículos seleccionados:

1. Título: Contextual Pathways Linking Cumulative Experiences of Racial Discrimination to Black American Men's COVID Vaccine Hesitancy Resumen: "A sizable proportion of Black American men report that they either do not plan to or are unsure about becoming vaccinated against COVID-19. The present study investigated hypotheses regarding the mechanisms by which experiences of racial discrimination are associated with Black American men's COVID-19 vaccine hesitancy."
2. Título: An Actionable Framework for Understanding and Improving Developer Experience Resumen: "The DX Framework provides a go-to reference for organizations that want to enable more productive and effective work environments for their developers."
3. Título: Sex-based differences in effector cells of the adaptive immune system during Alzheimer's disease and related dementias Resumen: "With two-thirds of the population affected with ADRD being women, ADRD has presented itself with a bias toward the female population. Here, we review the sex-based differences of pathological hallmarks of ADRD presentation and progression, sex-based differences in the adaptive immune system and how it changes with ADRD, and the importance of precision medicine in the development of a more targeted and personalized treatment for this devastating and prevalent neurodegenerative condition."

Obtención de nube de palabras por palabras clave

Este análisis se centra en la generación de una nube de palabras a partir de los títulos de los artículos después de aplicarles una limpieza de texto. Primero, se aplica la función ``clean_text`` a cada título en el DataFrame ``df``, lo que elimina la puntuación y convierte todas las palabras a minúsculas. Luego, se concatenan todos los títulos limpios en un solo texto.

Utilizando la biblioteca WordCloud, se genera una nube de palabras con una configuración específica: un ancho de 800 píxeles, una altura de 400 píxeles y un fondo blanco. La nube de palabras se visualiza con el comando ``imshow`` de Matplotlib en una figura de tamaño 10x5.

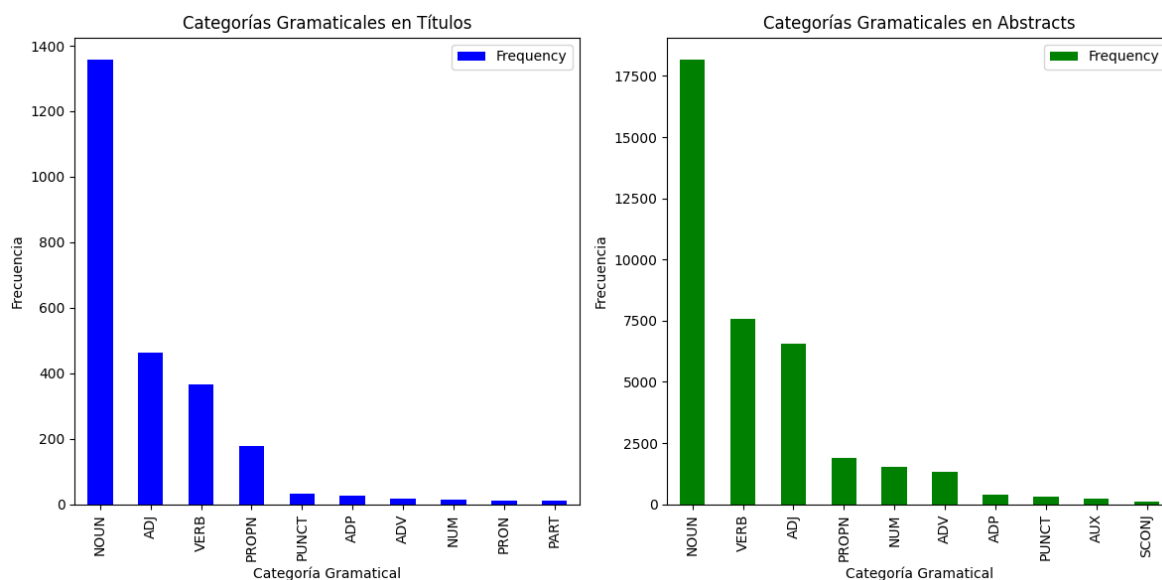

Esta visualización proporciona una representación gráfica de las palabras más frecuentes en los títulos de los artículos. Las palabras más grandes en la nube representan aquellas que aparecen con mayor frecuencia en los títulos, lo que permite identificar rápidamente los temas más relevantes o recurrentes en la colección de artículos analizados.

Tendencias Gramaticales en Títulos y Resúmenes de Artículos Científicos:

Este código realiza un análisis gramatical de los títulos y resúmenes de los artículos utilizando el modelo de lenguaje de spaCy. Primero, se carga el modelo pre-entrenado "en_core_web_sm" de spaCy. Luego, se define una función `get_pos_counts` que toma un texto como entrada, lo analiza con spaCy y cuenta la frecuencia de cada categoría gramatical (Part of Speech, POS) en el texto.

Después, se aplica esta función a los títulos y resúmenes de los artículos en el DataFrame `df`. Los resultados se almacenan en nuevas columnas llamadas 'title_pos_counts' y 'abstract_pos_counts'. Posteriormente, se suman las frecuencias de las categorías gramaticales para todos los títulos y resúmenes, lo que resulta en dos contadores acumulativos: `total_title_pos_counts` y `total_abstract_pos_counts`.

Estos contadores se convierten en DataFrames para su visualización. Se crean dos subplots en una figura de Matplotlib: uno para las categorías gramaticales más frecuentes en los títulos y otro para las categorías gramaticales más frecuentes en los resúmenes. Cada subplot muestra un gráfico de barras con las diez categorías gramaticales más frecuentes, donde el eje x representa las categorías gramaticales y el eje y representa la frecuencia de aparición. Los títulos y etiquetas de los ejes se añaden para mayor claridad.

DISCUSIÓN DE LOS RESULTADOS

Los resultados obtenidos a partir del análisis de los artículos seleccionados revelan varias tendencias y patrones significativos en la literatura académica relacionada con el impacto de los sesgos en la codificación y clasificación en diversas disciplinas científicas. A continuación, se discuten algunos puntos clave identificados en el estudio:

1. **Prevalencia de Temas Relacionados con Sesgos y Codificación:** Se observa una alta frecuencia de palabras clave como "analysis", "bias", "gender", "qualitative", y "social" en los títulos y resúmenes de los artículos seleccionados. Esto sugiere un interés generalizado en el estudio de sesgos y sus implicaciones en diferentes contextos científicos, desde la sociología hasta la neurología.
2. **Impacto de Sesgos en la Salud Pública:** Los resúmenes destacados revelan que el sesgo en la codificación y clasificación puede tener consecuencias significativas en la salud pública, como la vacilación ante la vacuna COVID-19 en comunidades minoritarias. Este hallazgo subraya la importancia de abordar los sesgos en la investigación y práctica médica para garantizar una atención equitativa y efectiva para todos.
3. **Perspectivas Interdisciplinarias:** Los resultados también muestran una diversidad de enfoques y disciplinas involucradas en el estudio de sesgos, desde la informática hasta la psicología. Esta multidisciplinariedad refleja la complejidad del fenómeno del sesgo y la necesidad de enfoques integrados para abordarlo de manera efectiva.
4. **Necesidad de Acción y Mejora:** La revisión de la literatura identifica brechas en el estudio de sesgos y sugiere enfoques innovadores, como el diseño especulativo y liberador, para abordar estas deficiencias. Estos hallazgos destacan la importancia de adoptar enfoques reflexivos y críticos en la investigación científica para mitigar el impacto de los sesgos y mejorar la calidad y equidad de los resultados.
5. **Tendencias Temporales:** La visualización de las tendencias temporales muestra un aumento en el número de publicaciones sobre sesgos y codificación en los últimos años, lo que indica un creciente interés y conciencia sobre este tema en la comunidad académica. Este aumento puede atribuirse a la creciente preocupación por la ética de la investigación y la equidad en la ciencia.

En conjunto, estos resultados destacan la importancia de abordar los sesgos en la codificación y clasificación en la investigación científica, así como la necesidad de enfoques interdisciplinarios y reflexivos para mitigar su impacto y promover una ciencia más justa y equitativa.

CONCLUSIONES

Concluyendo, el análisis exhaustivo realizado sobre la literatura académica relacionada con el impacto de los sesgos en la codificación y clasificación en diversas disciplinas científicas revela la importancia crítica de abordar este tema en la investigación contemporánea. La prevalencia de palabras clave relacionadas con sesgos y codificación en los títulos y resúmenes de los artículos analizados refleja un reconocimiento generalizado de la relevancia de este fenómeno en la ciencia actual. Además, la diversidad de disciplinas involucradas en el estudio de sesgos subraya la necesidad de enfoques interdisciplinarios para comprender su complejidad y desarrollar estrategias efectivas para abordarlos.

El análisis también destaca la identificación de brechas en el estudio de sesgos y la propuesta de enfoques innovadores para abordar estas deficiencias, lo que resalta la importancia de acciones concretas y mejora continua en la investigación científica. Asimismo, la tendencia temporal muestra un aumento en el número de publicaciones sobre sesgos y codificación en los últimos años, lo que sugiere una mayor conciencia y acción en

la comunidad académica para abordar este tema. En conjunto, estos hallazgos subrayan la necesidad crítica de abordar los sesgos en la investigación científica y promover enfoques interdisciplinarios, reflexivos y proactivos para garantizar una ciencia más justa, equitativa y confiable en el futuro.
